

Your guide to discussing very high triglycerides with your doctor

Having triglycerides (TGs) at 500 mg/dL or above is considered **very high**, and it's completely understandable to have questions or concerns. Take this guide with you to your next doctor appointment to have a meaningful conversation and make sure your questions are answered. Use the space below and on the back to jot down any notes or things you want to remember.

Understanding my disease

1. What could be causing my TG levels to be so high?

1. What symptoms should I watch for with very high TGs?

2. What risks come with having very high TGs?

3. What TG level should I aim for?

Creating a plan that works for me

1. What lifestyle changes can I make to help lower my TGs?

2. What medications are available specifically to treat very high TGs?

3. What goals should we work on together, and how will I know I'm moving in the right direction?

4. How long will it take to see results?
